Introducing Online Safety Work Sheet

Setting good passwords

Making good passwords is hard. Making good passwords that you can remember for lots of different websites and apps is even harder.

Follow these steps:

1 Start with a regular word that's at least six letters long, like "bananas."

2 Replace some of the letters with numbers and symbols, like "6@n@n@s."

3 Make a phrase with the word, like "ilike6@n@n@s."

4 Replace some of the new letters, like "!l!ke6@n@n@s."

5 Add the first and last letter of the account the password is for, like "f!l!ke6@n@n@s" (for Facebook).

6 Now turn the page over and see if you can remember it later!
